

SECTION 00220 - GEOTECHNICAL DATA

((OPTION !))

Subsoil investigations have been conducted at the site of the work. The geotechnical report(s) are available for review at the Municipal Utilities Department. Soil investigations were conducted for design information only and are not a part of the contract documents. The data shown in the report(s) are for subsurface conditions found at the time and place of the investigation.

The geotechnical report(s) is not a warrant of subsurface conditions. The City disclaims responsibility for the bidder's interpretation of data, such as projecting or extrapolating from the test holes to other locations on the site of the work soil bearing values and profiles, soil stability and the presence, level, and extent of underground water for subsurface conditions during construction operations.

The Contractor should visit the site and acquaint himself with all existing conditions. Prior to bidding, contractors may make their own subsurface investigations to satisfy themselves as to site and subsurface conditions but such subsurface investigations shall be performed only under time schedules and arrangements approved in advance by the Engineer.

((OPTION 2))

Subsoil investigations have not been conducted at the site of the work.

The Contractor should visit the site and acquaint himself with all existing conditions. Prior to bidding, contractors may make their own subsurface investigations to satisfy themselves as to site and subsurface conditions but such subsurface investigations shall be performed only under time schedules and arrangements approved in advance by the Engineer.

**** END OF SECTION ***
